Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sd	Fig. 3; 4lpp; English.
റ്റ	RMM = 54,621 dalton. It has features in common with envelope
റ്റ	glycoproteins of other herpesviruses. The first 21 AAs are hydrophobic
റ്റ	with the exception of Arg at position 6. This sequence could correspond
ဌ	to a signal peptide for membrane insertion and may well be removed
င္ပ	during translation and transport. AAs at positions 481-498 are strongly
റ്റ	hydrophobic and have the characteristics of a membrane-spanning region.
റ്റ	The carboxy terminal 11 AAs have a basic charge and may function as a
င္ပ	cytoplasmic anchor sequence. Four potential glycosylation sites are
36	present in the region between the putative signal sequence and the
2 6	Ceciionio 500 AP.

                                                                                                                                                                                                                                     of a sequence comprising fragments of the coding sequence of the human neurofilament subunit NF-H gene corresponding to nucleotides 1-1162 of the wild-type NF-H gene. This region contains GAGAG motifs. Frameshift mutants of the tau, ubiquitin, apolipoprotein E, microtubule-associated protein 2 (MAP-2), neurofilament subunit L, M and H and amyloid A4 genes are claimed. All these genes share a common GAGAN motif (N-A, G, C or T), which is the site of common GA dinucleotide deletion(s) that cause neurodegenerative disorders. Antigenic peptides used for the production of antibodies, and small nucleic acid sequences derived from frameshift mutants are used in the diagnosis, prevention and treatment of cancer and neurodegenerative diseases, e.g. Parkinson's disease, Alzheimer's disease, Down's supranuclear palsy (PSP), amyotrophic lateral sclerosis, Huntington's disease, multiple sclerosis, and other degenerative diseases such as cardiovascular disease and rheumatoid arthritis.

y in association with a matrix for bone reconstitution after
orthopaedic and plastic surgery
Disclosure; 51-53; 69pp; English.
The sequence encodes the prepro form of human osteogenic polypeptide-2
(h0p2-pp). The protein is useful as a subunit of osteogenic and
proteins capable of endochondral bone formation, and allogenic and
xenogenic implants in mammals. When implanted with a matrix, the
polypeptide locally induces the full developmental cascade of
endochondral bone formation and bone marrow differentiation. This
can be used for optimal predictable bone formation to correct, eg
can be used for optimal predictable bone formation to correct
can be used for optimal predictable bone formation to correct anomalies, and to treat non-union fractures. The polypeptide also
has dental and periodontal applicns., and may be used for cartilage

PT Treatment of chronic renal failure - using an osteogenic protein/bone morphogenetic protein renal therapeutic agent or protein/bone morphogenetic protein recells

PT morphogen or renal mesenchymal progenitor cells

PT morphogen or renal mesenchymal progenitor cells

CC This sequence represents the mouse osteogenic protein, OP-2. This sequence represents the mouse osteogenic protein daving, or at risk of, chronic renal failure which comprises administering an CC osteogenic protein/bone morphogenetic protein (OP/BMP) renal therapeutic agent or morphogen. The method can be used for treating e.g. chronic capent or morphogen. The method can be used for treating e.g. chronic conal failure, end-stage renal disease, chronic diabetic nephropathy, diabetic renal hypertrophy, hypertensive conditions of a content of a content or a batient or a batient

Such therapeutic agents can prevent, inhibit or delay the progressive loss of functional nephron units and the progressive decline in glomerular filtration rate (GFR) which slowly but inevitably leads to the need for renal replacement therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PT Extraction of osteogenic protein from mixture - using antibodies
PT specific for novel polypeptide chains useful as subunit(s) of
PT dimeric osteogenic protein(s)
PS Disclosure; Column 137-140; 127pp; English.

CC used in the present invention. The present invention describes methods
CC used in the present invention. The present invention describes methods
CC for selectively extracting an osteogenic protein (OP) from a mixture.
CC The method comprises: (a) exposing the mixture to an antibody that
CC specifically binds OP, separating the complex. In the methods OP
CC comprises a pair of oxidised subunits that are disulphide-bonded to form
CC a dimer, and one of the subunits has an amino acid (aa) sequence
CC sufficiently homologous to residues 335-431 of a 431 aa protein
CC designated OPS, sequence given in the specification. In dimeric form OP
CC capable of inducing cartilage and endochondral bone formation in a
CC mammal when disposed within a matrix implanted in the mammal. The
CC methods are used for recovering the recombinant proteins from cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC This sequence represents the murine osteogenic protein, mop-2. mop-2 the mop-2 protein can be used in the TGF-beta superfamily. Fragments CC of tides which may be used in the generation of antibodies with CC peptides which may be used in the generation of antibodies are CC capable of binding specificities for osteogenic proteins. The antibodies are CC capable of binding specifically to an epitope of the osteogenic protein CC cand may be used in an implantable osteogenic device which allows predictable bone formation to correct acquired and congenital cC cranofacial and other skeletal or dental anomalies. They may be used to induce local endochrondral bone formation in non-union fractures and in cother clinical applications including dental and periodontal applications where bone formation is required. Other potential applications include cartilage repair, e.g. in the treatment of osteograrthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

PS Disclosure and Claims 25-26; Page 127-129; 160pp; English.
CC Murine osteogenic protein mOP2 and proteins having at least 70% CC homology with it are preferred morphogens for inclusion in new morphogen-enriched nutritional formulations. The formulations are dietary compositions suitable for people at risk for tissue CC damage due to protein energy malnutrition or to altered metabolism in function and infant formulations to enhance tissue development in CC an infant or juvenile.

Morphogenic protein soluble complex - for regeneration of the mammals and diagnosing tissue disorders (Claim 3; Page 75-77; 120pp; English. This sequence represents the murine derived protein, osteogrotein, mOp-2. The mature Op-2 protein was used as at protein, mOp-2. The mature Op-2 protein of the invention. dimeric protein subunit in the dimeric protein subunits which associated to give a structure with morphogenic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         effects of cancer therapy.

Claim 35-36; Page 115-117; ISipp; English.

Morphogens comprising an amino acid sequence sharing at least
Morphogens comprising an amino acid sequence sharing at least
70% homology with OP-1, OP-2, CBMP2, BMP3(fx), Vg1(fx), Vgr(fx),
DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with
BMP5(fx) and BMP6(fx) are useful for maintaining the integrity of
the gastrointestinal tract luminal lining in a mammal, including
(1) limiting epithelial cell proliferation, (2) inhibiting ulcerative
lesion formation, (3) inhibiting inflammation normally associated
with ulcerative diseases, and/or (4) stimulating the repair of
ulcerative lesions and the regeneration of the luminal tissue.

Each subunit comprises a mature form of a subunit of a member of the morphogen family, non-covalently complexed with a peptide comprising a pro-region of a morphogenic family member, to form a complex more soluble in aqueous solvents than the uncomplexed subunits. The dimeric protein is useful in a therapeutic composition, pref. also containing a symptom-alleviating co-factor. The protein and corresponding antibody may be used in diagnostic assays, eg. to quantitate the amount of mature and soluble forms of morphogenic
                                                                                                                                                                                                                                                                                                       Mouse embryo full-length osteogenic protein OP-2 (W00239) includes a pro-sequence and the morphogenically active mature protein sequence (see also W00224) that includes a 7-Cys C-terminal domain. OP-2 can be expressed from intact or truncated cDNA (T33444) in prokaryotic or eukaryotic host cells. Mature Op-2 and other morphogens (see also W00221-35), partic. human OP-1 (W00221), can be used to induce dentine morphogenesis, to seal dental
                                                                                                                                                                                                                                                      cavities and to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a mouse osteogenic protein-2 (mOP-2).

CC OP-2 proteins are a group of morphogenically active proteins. Morphogens CC are inactive when reduced, but are active as oxidised homodimers and when CC oxidised with other morphogens (e.g. w36853-62). Comparison of the amino CC acid sequences of these morphogens has identified a consensus 6-7 CC cysteine motif at the C-terminal. Morphogenic proteins such as OP-2 play CC an important role, not only in embryogenesis, but also in tissue and CC organ maintenance and repair in mammals. They induce a developmental CC cascade of tissue-specific morphogenesis in a mammal. A novel method is CC described for screening a candidate compound for the ability to modulate cypression of a cellular gene encoding a naturally occurring morphogenic CC protein. The candidate compound is incubated with epithelial cells which CC express the cellular gene, and after a period of time the epithelial CC cells are assayed for the presence of or the amount of the protein CC expressed by the cellular gene. A change in the level of the morphogenic compounds of the compound that the opithelial colls in the amount of the protein CC expressed by the cellular gene.
                                                                                                                                                                                     Query Match
                                                                                                                                                    Matches
                                                                                                                                                                                                                                                           expressed by the cellular gene. A change in the level of the morphogenic protein relative to the level in the epithelial cells in the absence of the candidate compound is indicative of the ability of the compound to modulate expression of the cellular gene. The method can be used to identify compounds which can increase or decrease morphogen production or levels. Such compounds can be used in the treatment of, e.g.arthritis, emphysema, osteoporosis, kidney disease, lung diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LT 13

Morphogens comprising an amino acid sequence sharing at least 70% homology with OP-1, OP-2, CBMP2, Vgl(fx), Vgr(fx), DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with BMP3(fx), BMP5(fx) and BMP6(fx) are useful for integrating an implanted tooth in a tooth socket and for inhibiting tissue loss associated with periodontal disease or injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Murine OP-2; Morphogen-induced modulation of inflammatory response - and morphogen-induced modulation of inflammatory response - and resulting tissue damage, e.g. in autoimmune diseases, diabetes, asthma, ischemia reperfusion injury, etc.

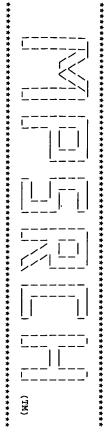

Claim 26; Page 126-127; 165pp; English.

Osteogenic protein (OP) -2 is a preferred morphogen for use in treating tissue damage in e.g. inflammatory disease, autoimmune disease, arthritis, psoriasis, dermatitis, diabetes autoimmune disease, arthritis, psoriasis, dermatitis, diabetes achd sequences can also be used. See R33401 for mature mOP-2. Sequence 399 AA;

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Dec 18 18:20:51 1998; MasPar time 40.56 Seconds 971.396 Million cell updates/sec

Tabular output not generated.

>US-08-951-733-20 (1-1154) from US08951733.pep 8624

Description: Perfect Score: Sequence:

1 HASGQRCVLLRTWEALAPAT......TALEAAANPALPSDFKTILD 1154

Scoring table: PAM 150 Gap 11

Searched: 107076 seqs, 34141958 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir56 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 54.111; Variance 116.481; scale 0.465

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
